Keyword index

A

3-aminobenzamide -- Activation of poly(ADP-ribose)polymerase in apoptic human cells, 378
accessible surface area -- Principles of protein-protein recognition from structure to thermodynamics, 497
Acer pseudoplatanus -- Transbilayer distribution of phosphatidylcholine and phosphatidylethanolamine in the vacuolar membrane of *Acer pseudoplatanus* cells, 174
active site -- The nucleoside deaminases for cytidine and adenosine: Structure, transition state stabilization, mechanism, and evolution, 92 -- Conformational changes of active sites during refolding of urea-denatured creatine kinase, 956
active site topology -- Arylhydrazines as probes of hemoprotein structure and function, 581
activity gel -- Biochemical properties and function of poly(ADP-ribose) glycohydrolase, 433
adenine phosphoribosyltransferase -- Regulation of the human poly(ADP-ribosyl) transferase promoter *via* alternative DNA racket structures, 480
ADP-ribose -- ADP-ribosylation reactions, 313
ADP-ribose transfer -- NAD glycohydrolases and the metabolism of cyclic ADP-ribose, 341 -- Evaluating the role of niacin in human carcinogenesis, 394
ADP-ribosyl cyclase -- Cyclic ADP-ribose and its metabolic enzymes, 345 -- New aspects of the physiological significance of NAD, poly ADP-ribose and cyclic ADP-ribose , 356
ADP-ribosylarginine hydrolase -- Characterization of mammalian ADP-ribosylation cycles, 319
ADP-ribosylation -- Characterization of mammalian ADP-ribosylation cycles, 319 -- Studies on the active-site structure of C3-like exoenzymes: Involvement of glutamic acid in catalysis of ADP-ribosylation, 326 -- Progress in identifying clinical relevance of inhibition, stimulation and measurements of poly ADP-ribosylation , 385 -- Analysis of biological function of poly(ADP-ribosyl)ation in *Drosophila melanogaster*, 466
ADPRT negative mouse -- On the biological role of the nuclear polymerizing NAD^+: Protein(ADP-ribosyl) transferase (ADPRT): ADPRT from *Dictyostelium discoideum* and inactivation of the ADPRT gene in the mouse, 444
adrenodoxin -- Purification and characterization of rat adrenodoxin, 719
adrenodoxin reductase -- Purification and characterization of rat adrenodoxin, 719
affinity labeling -- Highly selective affinity labeling of DNA polymerase α-primase from human placenta by reactive analogs of ATP, 699
aging -- Peroxisomal β–oxidation activity and catalase activity during development and aging in mouse liver, 288
AICARFT -- The stereospecific cytotoxic potency of (6R) and (6S)-(5,10-dideazatetrahydrofolate correlates with cellular folylpolyglutamate levels, 273
α-primase -- Highly selective affinity labeling of DNA polymerase α-primase from human placenta by reactive analogs of ATP, 699
amidoximes -- On the mechanism of nitric oxide formation upon oxidative cleavage of C=N(OH) bonds by NO-synthases and cytochromes P450, 661
aminoacyl-tRNA synthetase -- Aminoacylation of transfer RNAs with 2-thiouridine derivatives in the wobble position of the anticodon, 66 -- A structure-based multiple sequence alignment of all class 1 aminoacyl-tRNA synthetases, 194
aminoacylation -- Aminoacylation of transfer RNAs with 2-thiouridine derivatives in the wobble position of the anticodon, 66
amylose affinity chromatography -- Production and purification of active FGF2 *via* recombinant fusion protein, 162
anti-sense RNA -- RNA editing in higher plant mitochondria: Analysis of biochemistry and specificity, 79
antibacterial protein -- The secondary structure of the insect defensin A depends on its environment. A circular dichroism study, 240
antioxidant defense systems -- Oxygen free radicals and human disease, 147
antisense -- cAMP-dependent phosphorylation of the cardiac L-type Ca channel: A missing link?, 957
antisuppressors -- Aminoacylation of transfer RNAs with 2-thiouridine derivatives in the wobble position of the anticodon, 66
antitumoral drugs -- Induction of apoptotic cell death by DNA topoisomerase II inhibitors, 893
apolipoprotein B -- Apolipoprotein B messenger RNA editing: An update, 75
apoptosis -- Activation of poly(ADP-ribose)polymerase in apoptic human cells, 378 -- Poly(ADP-ribose) polymerase: Structure-function relationship, 456 -- Induction of apoptotic cell death by DNA topoisomerase II inhibitors, 893
aryl-iron complexes -- Arylhydrazines as probes of hemoprotein structure and function, 581
arylhydrazines -- Arylhydrazines as probes of hemoprotein structure and function, 581
ataxia telangiectasia -- Dose-rate effect on induction and repair rate of radiation-induced DNA double-strand breaks in a normal and an ataxia telangiectasia human fibroblast cell line, 900
ATP synthase -- RNA editing in wheat mitochondria, 87
ATPase -- Geminivirus replication: Genetic and biochemical characterization of Rep protein funtion, a review, 765
automated chemical synthesis -- Site-selected introduction of modified purine and pyrimidine ribonucleosides into RNA by automated phosphoramidite chemistry, 125
automodification -- Dissection of ADP-ribose polymer synthesis into individual steps of initiation, elongation, and branching, 403
autoregulation -- Regulation of the human poly(ADP-ribosyl) transferase promoter *via* alternative DNA racket structures, 480

B

Bacillus brevis -- Expression and secretion of malarial parasite β–tubulin in *Bacillus brevis*, 256
base conversion -- Nucleotide modification and base conversion of RNA: Summary and outlook, 3
β–oxidation -- Peroxisomal β-oxidation activity and catalase activity during development and aging in mouse liver, 288
binding protein -- A family of homologous substrate-binding proteins with a broad range of substrate specificity and dissimilar biological functions, 744
biochemical assay -- *In vitro* eukaryotic DNA excision repair: An overview, 796
biotin -- A radioactive assay for the degradation of neuropeptide Y, 739
BMDCA -- Lignan models as inhibitors of *Phanerochaete chrysosporium* lignin peroxidase, 707
bone resorption -- Heparin fails to potentiate the effects of IL-1β–mediated bone resorption of fetal rat long bones *in vitro*, 915
brush-border membrane vesicles -- Phospholipid fatty acid composition of hepatopancreatic brush-border membrane vesicles from the prawn *Penaeus japonicus*, 190

C

C3-like exoenzymes -- Studies on the active-site structure of C3-like exoenzymes: Involvement of glutamic acid in catalysis of ADP-ribosylation, 326
Ca^{2+} signalling -- Cyclic ADP-ribose and its metabolic enzymes, 345
calcium signalling -- NAD glycohydrolases and the metabolism of cyclic ADP-ribose, 341
cAMP-dependent phosphorylation -- cAMP-dependent phosphorylation of the cardiac L-type Ca channel: A missing link?, 957
cancer therapy -- The role of inhibitors of poly(ADP-ribose) polymerase as resistance-modifying agents in cancer therapy, 408
cap binding complexes -- Cap binding complexes and cellular growth control, 40
carcinogenesis -- Evaluating the role of niacin in human carcinogenesis, 394
cardiac calcium channel -- cAMP-dependent phosphorylation of the cardiac L-type Ca channel: A missing link?, 957
catalase -- Peroxisomal β–oxidation activity and catalase activity during development and aging in mouse liver, 288
catalytic base -- Mutation to glutamine of histidine 373, the catalytic base of flavocytochrome b_2 (L-lactate dehydrogenase), 621
catalytic residues -- A proposed mechanism of ADP-ribosylation catalyzed by the pertussis toxin S1 subunit, 333
catalytic rRNA -- Pseudouridine and $O^{2'}$-methylated nucleosides. Significance of their selective occurrence in rRNA domains that function in ribosome-catalyzed synthesis of the peptide bonds in proteins, 7
CD38 -- New aspects of the physiological significance of NAD, poly ADP-ribose and cyclic ADP-ribose, 356
cdk -- Overview of the regulation of S-phase in *Xenopus* egg extracts, 808
cell cycle -- Effect of phenylarsine oxide on the fission yeast *Schizosaccharomyces pombe* cell cycle, 279 -- Transgenic and knock-out models for studying DNA repair, 826 -- Nuclear binding of cell cycle-related proteins: Cyclin A *versus* proliferating cell nuclear antigen (PCNA), 888
cell extracts -- *In vitro* eukaryotic DNA excision repair: An overview, 796
cell-cycle checkpoints -- Role of poly(ADP-ribose) polymerase in cell-cycle checkpoint mechanisms following γ-irradiation, 462
cellular response -- Poly(ADP-ribose) polymerase: Structure-function relationship, 456
cellular stress protein regulation -- NAD and poly(ADP-ribose) regulation of proteins involved in response to cellular stress and DNA damage, 364
chemical modification -- Conformational changes of active sites during refolding of urea-denatured creatine kinase, 956
chromosome stability -- Chromosomal instability and alteration of telomere repeat sequences, 817
circular dichroism -- The secondary structure of the insect defensin A depends on its environment. A circular dichroism study, 240 -- Transaldimination induces coenzyme reorientation in pig kidney Dopa decarboxylase, 724
circular DNA -- Nuclear matrix-associated DNA fragments enhance autonomous replication of plasmids in chicken cells, 880
***cis*-acting signals** -- Herpes simplex virus type 1 replication and recombination, 787
cisplatin-DNA adducts -- Replication of DNA containing cisplatin lesions and its mutagenic consequences, 803

class C α_1 subunit -- cAMP-dependent phosphorylation of the cardiac L-type Ca channel: A missing link?, 957
codon misreading -- Mutation to glutamine of histidine 373, the catalytic base of flavocytochrome b_2 (L-lactate dehydrogenase), 621
coenzyme orientation -- Transaldimination induces coenzyme reorientation in pig kidney Dopa decarboxylase, 724
conformational gating -- Biological electron transfer: Structural and mechanistic studies, 506
consensus sequence -- A structure-based multiple sequence alignment of all class I aminoacyl-tRNA synthetases, 194
covalent flavin -- Structure activity studies of the substrate binding site in monoamine oxidase B, 643
creatine kinase -- Conformational changes of active sites during refolding of urea-denatured creatine kinase, 956
cryoenzymology -- Cryoenzymology: How to practice kinetic and structural studies, 937
crystallization -- Poly(ADP-ribose) polymerase: Structure-function relationship, 456
cyclic ADP-ribose -- NAD glycohydrolases and the metabolism of cyclic ADP-ribose, 341 -- Cyclic ADP-ribose and its metabolic enzymes, 345
cyclic ADP-ribose hydrolase -- New aspects of the physiological significance of NAD, poly ADP-ribose and cyclic ADP-ribose, 356
cyclin -- Overview of the regulation of S-phase in *Xenopus* egg extracts, 808
cyclin A -- Nuclear binding of cell cycle-related proteins: Cyclin A *versus* proliferating cell nuclear antigen (PCNA), 888
cytidine deaminase -- Apolipoprotein B messenger RNA editing: An update, 75
cytochrome b_2 core -- Reaction of the *Hansenula anomala* flavocytochrome b_2 and cytochrome b_2 core with inorganic outer sphere redox compounds, 531
cytochrome b5 -- Cytochrome b5, its functions, structure and membrane topology, 604
cytochrome c -- Flavocytochrome b_2-cytochrome c interactions: The electron transfer revisited, 516 -- Design of ruthenium-cytochrome c derivatives to measure electron transfer to cytochrome c peroxidase, 549
cytochrome c peroxidase -- Design of ruthenium-cytochrome c derivatives to measure electron transfer to cytochrome c peroxidase, 549
cytochrome oxidase -- Electron transfer and proton pumping in cytochrome oxidase, 668
cytochrome P450 -- Interpretations of cytochrome P450 mechanisms from kinetic studies, 573 -- Arylhydrazines as probes of hemoprotein structure and function, 581 -- Artificial P450/reductase fusion enzymes: What can we learn from their structures?, 594 -- Purification and characterization of rat adrenodoxin, 719
cytochrome P450 2E1 -- Interpretations of cytochrome P450 mechanisms from kinetic studies, 573
cytokines -- Heparin fails to potentiate the effects of IL-1β–mediated bone resorption of fetal rat long bones *in vitro*, 915
cytotoxicity -- The stereospecific cytotoxic potency of (6R) and (6S)-(5,10-dideazatetrahydrofolate correlates with cellular folylpolyglutamate levels, 273

D

3'-deoxyNAD -- Dissection of ADP-ribose polymer synthesis into individual steps of initiation, elongation, and branching, 403
(6R)-DDATHF -- The stereospecific cytotoxic potency of (6R) and (6S)-(5,10-dideazatetrahydrofolate correlates with cellular folylpolyglutamate levels, 273
(6S)-DDATHF -- The stereospecific cytotoxic potency of (6R) and (6S)-(5,10-dideazatetrahydrofolate correlates with cellular folylpolyglutamate levels, 273
de-N-glycosylation -- Do de-N-glycosylation enzymes have an important role in plant cells?, 751
deamination -- RNA editing in higher plant mitochondria: Analysis of biochemistry and specificity, 79
defensin A -- The secondary structure of the insect defensin A depends on its environment. A circular dichroism study, 240
degradation -- A radioactive assay for the degradation of neuropeptide Y, 739
deoxyribonucleotides -- Lack of stereospecificity of some cellular and viral enzymes involved in the synthesis of deoxyribonucleotides and DNA: Molecular basis for the antiviral activity of unnatural L-β–nucleosides, 861
dexamethasone -- Model systems for the study of the role of PADPRP in essential biological processes, 439
dextran derivatives -- Inhibition by dextran derivatives of FGF-2 plasmin-mediated degradation, 703
dichlorophenol indophenol -- Mutation to glutamine of histidine 373, the catalytic base of flavocytochrome b_2 (L-lactate dehydrogenase), 621
Dictyostelium -- On the biological role of the nuclear polymerizing NAD^+: Protein(ADP-ribosyl) transferase (ADPRT): ADPRT from *Dictyostelium discoideum* and inactivation of the ADPRT gene in the mouse, 444
differentiation -- Model systems for the study of the role of PADPRP in essential biological processes, 439
dihydroorotase -- Cloning, sequencing, and characterizing the *Lactobacillus leichmannii pyrC* gene encoding dihydroorotase, 265
DNA -- Vaccinia virus DNA replication: A short review, 774
DNA accessibility -- Interactions of poly(ADP-ribose) with nuclear proteins, 423
DNA binding -- Geminivirus replication: Genetic and biochemical characterization of Rep protein funtion, a review, 765
DNA damage -- NAD and poly(ADP-ribose) regulation of proteins involved in response to cellular stress and DNA damage, 364 -- Progress in identifying clinical relevance of inhibition, stimulation and measurements of poly ADP-ribosylation, 385 -- Molecular genetic systems to study the role of poly(ADP-ribosyl)ation in the cellular response to DNA damage, 450 -- Poly(ADP-ribose) polymerase: Structure-function relationship, 456
DNA double-strand breaks -- Dose-rate effect on induction and repair rate of radiation-induced DNA double-strand breaks in a normal and an ataxia telangiectasia human fibroblast cell line, 900
DNA fragmentation -- Activation of poly(ADP-ribose)polymerase in apoptic human cells, 378
DNA fragments -- Nuclear matrix-associated DNA fragments enhance autonomous replication of plasmids in chicken cells, 880
DNA ladder -- Induction of apoptotic cell death by DNA topoisomerase II inhibitors, 893
DNA lesions -- Fgp and UvrA proteins participate in the repair of DNA lesions induced by hydrogen peroxide in low iron level in *Escherichia coli*, 262
DNA polymerase -- Replication of DNA containing cisplatin lesions and its mutagenic consequences, 803 -- Highly selective affinity labeling of DNA polymerase α-primase from human placenta by reactive analogs of ATP, 699
DNA recognition -- The mouse *Kin-17* gene codes for a new protein involved in DNA transactions and is akin to the bacterial RecA protein, 854
DNA recombination -- ADP-ribosylation reactions, 313
DNA repair -- ADP-ribosylation reactions, 313 -- Interactions of poly(ADP-ribose) with nuclear proteins, 423 -- Model systems for the study of the role of PADPRP in essential biological processes, 439 -- On the biological role of the nuclear polymerizing NAD^+: Protein(ADP-ribosyl) transferase (ADPRT): ADPRT from *Dictyostelium discoideum* and inactivation of the ADPRT gene in the mouse, 444 -- Transgenic and knock-out models for studying DNA repair, 826 -- Dose-rate effect on induction and repair rate of radiation-induced DNA double-strand breaks in a normal and an ataxia telangiectasia human fibroblast cell line, 900 -- Stable SV40-transformation and characterization of some DNA repair properties of fibroblasts from a trichothiodystrophy patient, 906
DNA repair in mammals -- The mouse *Kin-17* gene codes for a new protein involved in DNA transactions and is akin to the bacterial RecA protein, 854
DNA replication -- Geminivirus replication: Genetic and biochemical characterization of Rep protein funtion, a review, 765 -- Role of mouse polyomavirus late region in the control of viral DNA replication: A review, 780 -- Replication of DNA containing cisplatin lesions and its mutagenic consequences, 803
DNA topoisomerase II -- Induction of apoptotic cell death by DNA topoisomerase II inhibitors, 893
DNA topology -- Biochemical chemistry of magnesium. Regulation of mithramycin-DNA interactions by Mg^{2+} coordination, 729
DNase I hypersensitive sites -- Effect of poly(ADP-ribose) synthetase on the expression of major histocompatibility complex (MHC) class II genes, 472
Dopa decarboxylase -- Transaldimination induces coenzyme reorientation in pig kidney Dopa decarboxylase, 724
dose-rate effect -- Dose-rate effect on induction and repair rate of radiation-induced DNA double-strand breaks in a normal and an ataxia telangiectasia human fibroblast cell line, 900
double-strand RNA processing -- Lethal double-stranded RNA processing activity of ribonuclease III in the absence of SuhB protein of *Escherichia coli*, 294
***Dpn*I-resistance assay** -- Nuclear matrix-associated DNA fragments enhance autonomous replication of plasmids in chicken cells, 880
DU 145 cells -- Reversion of malignant phenotype by 5-iodo-6-amino-1,2-benzopyrone, a non-covalently binding ligand of poly(ADP-ribose) polymerase, 374

E

E-ras 20 cells -- Reversion of malignant phenotype by 5-iodo-6-amino-1,2-benzopyrone, a non-covalently binding ligand of poly(ADP-ribose) polymerase, 374
EF-Tu -- The hinge region of *Escherichia coli* ribosomal protein L7/L12 is required for factor binding and GRTP hydrolysis, 925
egg extract -- Overview of the regulation of S-phase in *Xenopus* egg extracts, 808
eIF-4F -- Cap binding complexes and cellular growth control, 40
electron transfer -- Biological electron transfer: Structural and mechanistic studies, 506 -- Structure-function relationships in the ferredoxin/ferredoxin: $NADP^+$ reductase system from *Anabaene*, 539 -- Design of ruthenium-cytochrome c derivatives to measure electron transfer to cytochrome c peroxidase, 549 -- Electron and proton transfer to the quinones in bacterial photosynthetic reaction centers: Insight from combined approaches of molecular genetics and biophysics, 677 -- Purification and characterization of rat adrenodoxin, 719
electrostatic interaction -- Flavocytochrome b_2-cytochrome c interactions: The electron transfer revisited, 516

elongation of translation -- Comparative analysis of ATPase of yeast elongation factor 3 and ATPase associated with *Tetrahymena* ribosomes, 713
endo-exoglycosidic activity -- Biochemical properties and function of poly(ADP-ribose) glycohydrolase, 433
endonuclease -- Geminivirus replication: Genetic and biochemical characterization of Rep protein funtion, a review, 765
ENGase -- Do de-N-glycosylation enzymes have an important role in plant cells?, 751
enzyme mechanism -- The nucleoside deaminases for cytidine and adenosine: Structure, transition state stabilization, mechanism, and evolution, 92 -- A proposed mechanism of ADP-ribosylation catalyzed by the pertussis toxin S1 subunit, 333
Escherichia coli -- Fgp and UvrA proteins participate in the repair of DNA lesions induced by hydrogen peroxide in low iron level in *Escherichia coli*, 262
etoposide -- Activation of poly(ADP-ribose)polymerase in apoptic human cells, 378
evolution -- A family of homologous substrate-binding proteins with a broad range of substrate specificity and dissimilar biological functions, 744
evolution of eukaryotes -- Comparative analysis of ATPase of yeast elongation factor 3 and ATPase associated with *Tetrahymena* ribosomes, 713
excision repair -- *In vitro* eukaryotic DNA excision repair: An overview, 796
expression studies -- cAMP-dependent phosphorylation of the cardiac L-type Ca channel: A missing link?, 957
extracellular slime layer -- Identity of macromolecules present in the extracellular slime layer of *Staphylococcus epidermis*, 217

F

2-fluoro-2-deoxy-D-glucose -- Reciprocal effects of 2-fluoro-2-deoxy-D-glucose and glucose on their metabolism in *Saccharomyces cerevisiae* studied by multi-nuclear NMR spectroscopy, 233
fatty acid synthase -- Insulin-like effects of vanadate and selenate on the expression of glucose-6-phosphate dehydrogenase and fatty acid synthase in diabetic rats, 919
fatty acids -- Phospholipid fatty acid composition of hepatopancreatic brush-border membrane vesicles from the prawn *Penaeus japonicus*, 190
fibroblast growth factor-2 -- Inhibition by dextran derivatives of FGF-2 plasmin-mediated degradation, 703
flavin semiquinone -- Structure-function relationships in the ferredoxin/ferredoxin: $NADP^+$ reductase system from *Anabaene*, 539
flavocytochrome b_2 -- Flavocytochrome b_2-cytochrome c interactions: The electron transfer revisited, 516 -- Reaction of the *Hansenula anomala* flavocytochrome b_2 and cytochrome b_2 core with inorganic outer sphere redox compounds, 531
flavoenzyme -- L-Lactate oxidase and L-lactate monooxygenas: Mechanistic variations on a common structural theme, 631
flavohemoprotein -- Mutation to glutamine of histidine 373, the catalytic base of flavocytochrome b_2 (L-lactate dehydrogenase), 621
flavoproteins -- NADPH-P-450 reductase: Structural and functional comparisons of the eukaryotic and prokaryotic isoforms, 562
Fpg and UvrA proteins -- Fgp and UvrA proteins participate in the repair of DNA lesions induced by hydrogen peroxide in low iron level in *Escherichia coli*, 262
FPGS -- The stereospecific cytotoxic potency of (6R) and (6S)-(5,10-dideazatetrahydrofolate correlates with cellular folylpolyglutamate levels, 273
free radicals -- Stimulation of translation by reactive oxygen species in a cell-free system, 182
fusion protein -- Production and purification of active FGF2 *via* recombinant fusion protein, 162

G

G2 arrest -- Poly(ADP-ribose) polymerase: Structure-function relationship, 456
gene expression -- Expression and secretion of malarial parasite β–tubulin in *Bacillus brevis*, 256
gene regulation -- Effect of poly(ADP-ribose) synthetase on the expression of major histocompatibiiity complex (MHC) class II genes, 472
gene targeting -- On the biological role of the nuclear polymerizing NAD^+: Protein(ADP-ribosyl) transferase (ADPRT): ADPRT from *Dictyostelium discoideum* and inactivation of the ADPRT gene in the mouse, 444
genetic engineering -- Artificial P450/reductase fusion enzymes: What can we learn from their structures?, 594
glucose metabolism -- Reciprocal effects of 2-fluoro-2-deoxy-D-glucose and glucose on their metabolism in *Saccharomyces cerevisiae* studied by multinuclear NMR spectroscopy, 233
glucose-6-phosphate dehydrogenase -- Insulin-like effects of vanadate and selenate on the expression of glucose-6-phosphate dehydrogenase and fatty acid synthase in diabetic rats, 919
glutamic acid -- Studies on the active-site structure of C3-like exoenzymes: Involvement of glutamic acid in catalysis of ADP-ribosylation, 326
glycoconjugates -- Identity of macromolecules present in the extracellular slime layer of *Staphylococcus epidermis*, 217
glycosylphosphatidylinositol anchor -- Characterization of mammalian ADP-ribosylation cycles, 319
growth phase -- Growth phase and growth rate dependence of ribosomal peptidyltransferase activity status in *Escherichia coli*, 963
growth rate -- Growth phase and growth rate dependence of ribosomal peptidyltransferase activity status in *Escherichia coli*, 963
GTP hydrolysis -- The hinge region of *Escherichia coli* ribosomal protein L7/L12 is required for factor binding and GRTP hydrolysis, 925
guide RNA -- RNA editing in higher plant mitochondria: Analysis of biochemistry and specificity, 79

H-I-J

Hansenula anomala -- Reaction of the *Hansenula anomala* flavocytochrome b_2 and cytochrome b_2 core with inorganic outer sphere redox compounds, 531
hemoproteins -- NADPH-P-450 reductase: Structural and functional comparisons of the eukaryotic and prokaryotic isoforms, 562 -- Arylhydrazines as probes of hemoprotein structure and function, 581
heparin free FGF2 -- Production and purification of active FGF2 *via* recombinant fusion protein, 162
heparin-like molecules -- Inhibition by dextran derivatives of FGF-2 plasmin-mediated degradation, 703
heterocyclic amines -- Cell differentiation induced by poly(ADP-ribose) synthetase inhibitors, 368
heterologous expression in yeast -- Artificial P450/reductase fusion enzymes: What can we learn from their structures?, 594
hinge deletion -- The hinge region of *Escherichia coli* ribosomal protein L7/L12 is required for factor binding and GRTP hydrolysis, 925
histone shuttle -- Interactions of poly(ADP-ribose) with nuclear proteins, 423
homologous recombination -- Characterization of RecA mediated homologous pairing on nitrocellulose membrane, 840 -- *In vitro* inhibition of RecA-mediated homologous pairing by UmuD'C proteins, 848
HSV-1 -- Herpes simplex virus type 1 replication and recombination, 787
human placenta -- Highly selective affinity labeling of DNA polymerase α-primase from human placenta by reactive analogs of ATP, 699
hydrogen isotope effects -- Interpretations of cytochrome P450 mechanisms from kinetic studies, 573
γ-irradiation -- Role of poly(ADP-ribose) polymerase in cell-cycle checkpoint mechanisms following γ-irradiation, 462
immortalization -- Chromosomal instability and alteration of telomere repeat sequences, 817
***In vitro* assay** -- Characterization of RecA mediated homologous pairing on nitrocellulose membrane, 840
***In vitro* translation** -- The ability of bovine mitochondrial transfer RNA^{Met} to decode AUG and AUA codons, 104 -- Stimulation of translation by reactive oxygen species in a cell-free system, 182
inducible systems -- The mouse *Kin-17* gene codes for a new protein involved in DNA transactions and is akin to the bacterial RecA protein, 854
inhibitors -- The role of inhibitors of poly(ADP-ribose) polymerase as resistance-modifying agents in cancer therapy, 408
insect defensin -- The secondary structure of the insect defensin A depends on its environment. A circular dichroism study, 240
insulin -- New aspects of the physiological significance of NAD, poly ADP-ribose and cyclic ADP-ribose, 356 -- Insulin-like effects of vanadate and selenate on the expression of glucose-6-phosphate dehydrogenase and fatty acid synthase in diabetic rats, 919
interleukin-1 β — Heparin fails to potentiate the effects of IL-1β-mediated bone resorption of fetal rat long bones *in vitro*, 915
intracellular NAD -- Evaluating the role of niacin in human carcinogenesis, 394
isoforms -- Biochemical properties and function of poly(ADP-ribose) glycohydrolase, 433
jojoba -- Molecular analysis of RAPD DNA based markers: Their potential use for the detection of genetic variability in jojoba (*Simmondsia chinensis* L Schneider), 931

K-L

K-ras oncogene -- About the large fluctuations observed using gas-phase molecular dynamics in the K-ras gene containing a mismatch, 835
keratinocytes -- Model systems for the study of the role of PADPRP in essential biological processes, 439
***Kin-17* gene** -- The mouse Kin-17 gene codes for a new protein involved in DNA transactions and is akin to the bacterial RecA protein, 854
kin17 protein -- The mouse *Kin-17* gene codes for a new protein involved in DNA transactions and is akin to the bacterial RecA protein, 854
kinetics -- Cryoenzymology: How to practice kinetic and structural studies, 937 -- Flavocytochrome b_2-cytochrome c interactions: The electron transfer revisited, 516
knock-out mice -- Transgenic and knock-out models for studying DNA repair, 826
L-2-hydroxy acid oxidase A -- *In vitro* oxidative decarboxylation of L-2-hydroxy-4-methylthiobutanoic acid by L-2-hydroxy acid oxidase A from chicken liver, 249
L-2-hydroxy-4-methylthiobutanoic acid -- *In vitro* oxidative decarboxylation of L-2-hydroxy-4-methylthiobutanoic acid by L-2-hydroxy acid oxidase A from chicken liver, 249
L-β–nucleosides -- Lack of stereospecificity of some cellular and viral enzymes involved in the synthesis of deoxyribonucleotides and DNA: Molecular basis for the antiviral activity of unnatural L–β-nucleosides, 861

L7/L12 -- The hinge region of *Escherichia coli* ribosomal protein L7/L12 is required for factor binding and GRTP hydrolysis, 925
L7/L12 protein -- Growth phase and growth rate dependence of ribosomal peptidyltransferase activity status in *Escherichia coli*, 963
lactate -- L-Lactate oxidase and L-lactate monooxygenas: Mechanistic variations on a common structural theme, 631
Lactobacillus leichmannii -- Cloning, sequencing, and characterizing the *Lactobacillus leichmannii pyrC* gene encoding dihydroorotase, 265
laser flash photolysis -- Structure-function relationships in the ferredoxin/ferredoxin: $NADP^+$ reductase system from *Anabaene*, 539
late region mutants -- Role of mouse polyomavirus late region in the control of viral DNA replication: A review, 780
leucine zipper -- Analysis of biological function of poly(ADP-ribosyl)ation in *Drosophila melanogaster*, 466
licensing factor -- Overview of the regulation of S-phase in *Xenopus* egg extracts, 808
lignin peroxidase -- Lignan models as inhibitors of *Phanerochaete chrysosporium* lignin peroxidase, 707
long distance electron transfer -- Flavocytochrome b_2-cytochrome c interactions: The electron transfer revisited, 516
low iron level -- Fgp and UvrA proteins participate in the repair of DNA lesions induced by hydrogen peroxide in low iron level in *Escherichia coli*, 262

M

3-methylthiopropionate -- *In vitro* oxidative decarboxylation of L-2-hydroxy-4-methylthiobutanoic acid by L-2-hydroxy acid oxidase A from chicken liver, 249
magnesium -- Biochemical chemistry of magnesium. Regulation of mithramycin-DNA interactions by Mg^{2+} coordination, 729
malignant phenotype -- Reversion of malignant phenotype by 5-iodo-6-amino-1,2-benzopyrone, a non-covalently binding ligand of poly(ADP-ribose) polymerase, 374
mass spectrometry -- Implications of a functional large ribosomal RNA with only three modified nucleotides, 30
membrane binding domain of cytochrome b5 -- Cytochrome b5, its functions, structure and membrane topology, 604
membrane protein -- Electron and proton transfer to the quinones in bacterial photosynthetic reaction centers: Insight from combined approaches of molecular genetics and biophysics, 677
membrane-bound pyrophosphatase -- Comparison of the hydrolysis of $Zn\text{-}PPi^{2-}$ and the $MgPPi^{2-}$ as substrates and the effect of free cations upon membrane-bound pyrophosphatase of *Rhodospirillum rubrum*, 949
methionine hydroxy analogue -- *In vitro* oxidative decarboxylation of L-2-hydroxy-4-methylthiobutanoic acid by L-2-hydroxy acid oxidase A from chicken liver, 249
methylation -- Enzymatic formation of N^2,N^2-dimethylguanosine in eukaryotic tRNA: Importance of the tRNA architecture, 54 -- tRNA-m1G methyltransferase interactions: Touching bases with structure, 62
metoclopramide -- Progress in identifying clinical relevance of inhibition, stimulation and measurements of poly ADP-ribosylation, 385
MHC class II -- Effect of poly(ADP-ribose) synthetase on the expression of major histocompatibility complex (MHC) class II genes, 472
mismatch -- About the large fluctuations observed using gas-phase molecular dynamics in the K-ras gene containing a mismatch, 835
mithramycin -- Biochemical chemistry of magnesium. Regulation of mithramycin-DNA interactions by Mg^{2+} coordination, 729
mitochondria -- RNA editing in wheat mitochondria, 87 -- The ability of bovine mitochondrial transfer RNA^{Met} to decode AUG and AUA codons, 104
mitochondrial RNA -- RNA editing in wheat mitochondria, 87
modified nucleosides -- Pseudouridine and $O^{2'}$-methylated nucleosides. Significance of their selective occurrence in rRNA domains that function in ribosome-catalyzed synthesis of the peptide bonds in proteins, 7 -- Aminoacylation of transfer RNAs with 2-thiouridine derivatives in the wobble position of the anticodon, 66 -- Site-selected introduction of modified purine and pyrimidine ribonucleosides into RNA by automated phosphoramidite chemistry, 125 -- Structures of posttrranscriptionally modified nucleosides from RNA, 135 -- Post-transcriptionally modified nucleosides in transfer RNA: Their locations and frequencies, 139 -- Mobilities of modified ribonucleotides on two-dimensional cellulose thin-layer chromatography, 142
modified nucleotides -- Implications of a functional large ribosomal RNA with only three modified nucleotides, 30
molecular dynamics -- About the large fluctuations observed using gas-phase molecular dynamics in the K-ras gene containing a mismatch, 835
molecular markers -- Molecular analysis of RAPD DNA based markers: Their potential use for the detection of genetic variability in jojoba (*Simmondsia chinensis* L Schneider), 931
mono-ADP-ribosyltransferase -- Characterization of mammalian ADP-ribosylation cycles, 319
monoamine oxidase -- Structure activity studies of the substrate binding site in monoamine oxidase B, 643
monomeric G protein -- Small G proteins and the neutrophil NADPH oxidase, 651
monooxygenase -- L-Lactate oxidase and L-lactate monooxygenas: Mechanistic variations on a common structural theme, 631 -- On the mechanism of nitric oxide formation upon oxidative cleavage of C=N(OH) bonds by NO-synthases and cytochromes P450, 661
mouse liver -- Peroxisomal β–oxidation activity and catalase activity during development and aging in mouse liver, 288
multiple alignment -- A structure-based multiple sequence alignment of all class I aminoacyl-tRNA synthetases, 194
mutagenesis -- Replication of DNA containing cisplatin lesions and its mutagenic consequences, 803
myocardial work -- The phosphocreatine overshoot occurs independent of myocardial work, 245

N

N-dealkylation -- Interpretations of cytochrome P450 mechanisms from kinetic studies, 573
N-hydroxyguanidines -- On the mechanism of nitric oxide formation upon oxidative cleavage of C=N(OH) bonds by NO-synthases and cytochromes P450, 661
N^{ω}-hydroxy-L-arginine -- On the mechanism of nitric oxide formation upon oxidative cleavage of C=N(OH) bonds by NO-synthases and cytochromes P450, 661
NAD -- Dissection of ADP-ribose polymer synthesis into individual steps of initiation, elongation, and branching, 403 -- Analysis of biological function of poly(ADP-ribosyl)ation in *Drosophila melanogaster*, 466 -- ADP-ribosylation reaction in plants, 486
NAD-glycohydrolase -- A proposed mechanism of ADP-ribosylation catalyzed by the pertussis toxin S1 subunit, 333 -- NAD glycohydrolases and the metabolism of cyclic ADP-ribose, 341
NADPH-oxidase -- Small G proteins and the neutrophil NADPH oxidase, 651
NADPH-P-450 reductase -- NADPH-P-450 reductase: Structural and functional comparisons of the eukaryotic and prokaryotic isoforms, 562
neuropeptide Y -- A radioactive assay for the degradation of neuropeptide Y, 739
neutrophil -- Small G proteins and the neutrophil NADPH oxidase, 651
nickel -- A family of homologous substrate-binding proteins with a broad range of substrate specificity and dissimilar biological functions, 744
nicotinamide -- Evaluating the role of niacin in human carcinogenesis, 394
nicotinic acid -- Evaluating the role of niacin in human carcinogenesis, 394
NMR -- Biochemical chemistry of magnesium. Regulation of mithramycin-DNA interactions by Mg^{2+} coordination, 729
non-universal genetic code -- The ability of bovine mitochondrial transfer RNA^{Met} to decode AUG and AUA codons, 104
nuclear binding -- Nuclear binding of cell cycle-related proteins: Cyclin A *versus* proliferating cell nuclear antigen (PCNA), 888
nucleases -- Influence of modified nucleosides on tRNA structure as probed by two plant nucleases, 109
nucleoside modification -- Influence of modified nucleosides on tRNA structure as probed by two plant nucleases, 109
nucleotide modification -- Nucleotide modification and base conversion of RNA: Summary and outlook, 3
nucleotide sequence -- Cloning, sequencing, and characterizing the *Lactobacillus leichmannii pyrC* gene encoding dihydroorotase, 265

O-P

2'-O-methyl -- Classical and novel approaches to the detection and localization of the numerous modified nucleotides in eukaryotic ribosomal RNA, 22
2'-O-methylation -- Phylogenetic conservation of modified nucleotides in the terminal loop 1 of the spliceosomal U5 snRNA, 16
***Oenothera* mitochondria** -- RNA editing in higher plant mitochondria: Analysis of biochemistry and specificity, 79
oligoribonucleotides -- Solid-phase synthesis of oligoribonucleotides using T4 RNA ligase and T4 polynucleotide kinase, 227
oriC sequestration -- Importance of the replication origin sequestration in cell division of *Escherichia coli*, 875
outer sphere compounds -- Reaction of the *Hansenula anomala* flavocytochrome b_2 and cytochrome b_2 core with inorganic outer sphere redox compounds, 531
ovarian tumors -- Variations in tRNA modifications, particularly of their queuine content in higher eukaryotes. Its relation to malignancy grading, 99
oxidative stress -- Progress in identifying clinical relevance of inhibition, stimulation and measurements of poly ADP-ribosylation, 385
oxygen -- Stimulation of translation by reactive oxygen species in a cell-free system, 182
oxygen free radical pathologies -- Oxygen free radicals and human disease, 147
oxygen free radicals -- Oxygen free radicals and human disease, 147
oxygen toxicity -- Oxygen free radicals and human disease, 147
P chrysosporium -- Lignan models as inhibitors of *Phanerochaete chrysosporium* lignin peroxidase, 707
P450 monooxygenase -- Artificial P450/reductase fusion enzymes: What can we learn from their structures?, 594

Panaeus japonicus -- Phospholipid fatty acid composition of hepatopancreatic brush-border membrane vesicles from the prawn *Penaeus japonicus*, 190

Pediococcus -- Characterization and replication mode determination of the minimal replicon of *Tetragenococcus halophila* ATCC33315 plasmid pUCL287, 868

peptide backbone distortions -- The geometrical analysis of peptide backbone structure and its local deformations, 204

peptidyl transferase -- Implications of a functional large ribosomal RNA with only three modified nucleotides, 30

peptidyltransferase -- Growth phase and growth rate dependence of ribosomal peptidyltransferase activity status in *Escherichia coli*, 963

peroxidases -- Arylhydrazines as probes of hemoprotein structure and function, 581

peroxisomes -- Peroxisomal β–oxidation activity and catalase activity during development and aging in mouse liver, 288

pertussis toxin -- A proposed mechanism of ADP-ribosylation catalyzed by the pertussis toxin S1 subunit, 333

phenylarsine oxide -- Effect of phenylarsine oxide on the fission yeast *Schizosaccharomyces pombe* cell cycle, 279

phosphocreatine overshoot -- The phosphocreatine overshoot occurs independent of myocardial work, 245

phospholipids -- Transbilayer distribution of phosphatidylcholine and phosphatidylethanolamine in the vacuolar membrane of *Acer pseudoplatanus* cells, 174 -- Phospholipid fatty acid composition of hepatopancreatic brush-border membrane vesicles from the prawn *Penaeus japonicus*, 190

phosphoramidite chemistry -- Site-selected introduction of modified purine and pyrimidine ribonucleosides into RNA by automated phosphoramidite chemistry, 125

photosynthesis -- Electron and proton transfer to the quinones in bacterial photosynthetic reaction centers: Insight from combined approaches of molecular genetics and biophysics, 677

Physarum polycephalum -- Phylogenetic conservation of modified nucleotides in the terminal loop 1 of the spliceosomal U5 snRNA, 16

plant virus -- Geminivirus replication. Genetic and biochemical characterization of Rep protein funtion, a review, 765

plasmid -- Characterization and replication mode determination of the minimal replicon of *Tetragenococcus halophila* ATCC33315 plasmid pUCL287, 868

plasmin -- Inhibition by dextran derivatives of FGF-2 plasmin-mediated degradation, 703

Plasmodium falciparum -- Expression and secretion of malarial parasite β–tubulin in *Bacillus brevis*, 256

PNGase -- Do de-N-glycosylation enzymes have an important role in plant cells?, 751

poly ADP-ribosylation -- ADP-ribosylation reaction in plants, 486

poly(ADP-ribose) -- ADP-ribosylation reactions, 313 -- NAD and poly(ADP-ribose) regulation of proteins involved in response to cellular stress and DNA damage, 364 -- Dissection of ADP-ribose polymer synthesis into individual steps of initiation, elongation, and branching, 403

poly(ADP-ribose) glycohydrolase -- Biochemical properties and function of poly(ADP-ribose) glycohydrolase, 433

poly(ADP-ribose) polymerase -- Reversion of malignant phenotype by 5-iodo-6-amino-1,2-benzopyrone, a non-covalently binding ligand of poly(ADP-ribose) polymerase, 374 -- Activation of poly(ADP-ribose)polymerase in apoptic human cells, 378 -- Dissection of ADP-ribose polymer synthesis into individual steps of initiation, elongation, and branching, 403 -- The role of inhibitors of poly(ADP-ribose) polymerase as resistance-modifying agents in cancer therapy, 408 -- Molecular genetic systems to study the role of poly(ADP-ribosyl)ation in the cellular response to DNA damage, 450 -- Role of poly(ADP-ribose) polymerase in cell-cycle checkpoint mechanisms following γ-irradiation, 462

poly(ADP-ribose) synthetase -- Effect of poly(ADP-ribose) synthetase on the expression of major histocompatibility complex (MHC) class II genes, 472

poly(ADP-ribosyl) transferase -- Regulation of the human poly(ADP-ribosyl) transferase promoter *via* alternative DNA racket structures, 480

polymer binding -- Interactions of poly(ADP-ribose) with nuclear proteins, 423

polymerase -- tRNAs as primer of reverse transcriptases, 113

polyomavirus -- Role of mouse polyomavirus late region in the control of viral DNA replication: A review, 780

post-ischemic myocardium -- The phosphocreatine overshoot occurs independent of myocardial work, 245

post-translational modification -- ADP-ribosylation reaction in plants, 486

poxvirus -- Vaccinia virus DNA replication: A short review, 774

proliferating cell nuclear antigen -- Nuclear binding of cell cycle-related proteins: Cyclin A *versus* proliferating cell nuclear antigen (PCNA), 888

promoter structure -- Regulation of the human poly(ADP-ribosyl) transferase promoter *via* alternative DNA racket structures, 480

protease -- A radioactive assay for the degradation of neuropeptide Y, 739

protein biosynthesis -- Pseudouridine and $O^{2'}$-methylated nucleosides. Significance of their selective occurrence in rRNA domains that function in ribosome-catalyzed synthesis of the peptide bonds in proteins, 7

protein engineering -- Artificial P450/reductase fusion enzymes: What can we learn from their structures?, 594

protein folding -- The geometrical analysis of peptide backbone structure and its local deformations, 204

protein secretion -- Expression and secretion of malarial parasite β–tubulin in *Bacillus brevis*, 256

protein targeting -- Location of N^2,N^2-dimethylguanosine-specific tRNA methyltransferase, 45

protein-protein interaction -- Principles of protein-protein recognition from structure to thermodynamics, 497

proton transfer -- Electron and proton transfer to the quinones in bacterial photosynthetic reaction centers: Insight from combined approaches of molecular genetics and biophysics, 677

pseudouridine -- Pseudouridine and O^2-methylated nucleosides. Significance of their selective occurrence in rRNA domains that function in ribosome-catalyzed synthesis of the peptide bonds in proteins, 7 -- Phylogenetic conservation of modified nucleotides in the terminal loop 1 of the spliceosomal U5 snRNA, 16

pyridoxal phosphate -- Transaldimination induces coenzyme reorientation in pig kidney Dopa decarboxylase, 724

pyrimidine biosynthesis -- Cloning, sequencing, and characterizing the *Lactobacillus leichmannii pyrC* gene encoding dihydroorotase, 265

Q-R

quadruplex DNA -- Regulation of the human poly(ADP-ribosyl) transferase promoter *via* alternative DNA racket structures, 480

queuine -- Variations in tRNA modifications, particularly of their queuine content in higher eukaryotes. Its relation to malignancy grading, 99

radiopotentiation -- The role of inhibitors of poly(ADP-ribose) polymerase as resistance-modifying agents in cancer therapy, 408

radiosensitization -- Molecular genetic systems to study the role of poly(ADP-ribosyl)ation in the cellular response to DNA damage, 450

random energy model -- Principles of protein-protein recognition from structure to thermodynamics, 497

random mutagenesis -- Poly(ADP-ribose) polymerase: Structure-function relationship, 456

Rap 1A -- Small G proteins and the neutrophil NADPH oxidase, 651

RAPD -- Molecular analysis of RAPD DNA based markers: Their potential use for the detection of genetic variability in jojoba (*Simmondsia chinensis* L Schneider), 931

rapid kinetics -- Reaction of the *Hansenula anomala* flavocytochrome b_2 and cytochrome b_2 core with inorganic outer sphere redox compounds, 531

rapid reaction kinetics -- L-Lactate oxidase and L-lactate monooxygenas: Mechanistic variations on a common structural theme, 631

reaction center -- Electron and proton transfer to the quinones in bacterial photosynthetic reaction centers: Insight from combined approaches of molecular genetics and biophysics, 677

RecA protein -- Characterization of RecA mediated homologous pairing on nitrocellulose membrane, 840

RecA protein recombination -- The mouse *Kin-17* gene codes for a new protein involved in DNA transactions and is akin to the bacterial RecA protein, 854

recognition -- tRNA-m1G methyltransferase interactions: Touching bases with structure, 62

recombination -- Vaccinia virus DNA replication: A short review, 774 -- Herpes simplex virus type 1 replication and recombination, 787

recombination assays -- *In vitro* inhibition of RecA-mediated homologous pairing by UmuD'C proteins, 848

redox active metals -- Electron transfer and proton pumping in cytochrome oxidase, 668

redox complexes -- Principles of protein-protein recognition from structure to thermodynamics, 497

redox proteins -- Structure-function relationships in the ferredoxin/ferredoxin: $NADP^+$ reductase system from *Anabaene*, 539

refolding -- Conformational changes of active sites during refolding of urea-denatured creatine kinase, 956

replication -- Vaccinia virus DNA replication: A short review, 774 -- Herpes simplex virus type 1 replication and recombination, 787 -- Overview of the regulation of S-phase in *Xenopus* egg extracts, 808

replicon theory -- Importance of the replication origin sequestration in cell division of *Escherichia coli*, 875

reporter gene -- Effect of poly(ADP-ribose) synthetase on the expression of major histocompatibility complex (MHC) class II genes, 472

resistance-modifying agents -- The role of inhibitors of poly(ADP-ribose) polymerase as resistance-modifying agents in cancer therapy, 408

respiratory enzymes -- Electron transfer and proton pumping in cytochrome oxidase, 668

retroelements -- tRNAs as primer of reverse transcriptases, 113

retrovirus -- tRNAs as primer of reverse transcriptases, 113

reverse transcription -- tRNAs as primer of reverse transcriptases, 113

RFLP -- Molecular analysis of RAPD DNA based markers: Their potential use for the detection of genetic variability in jojoba (*Simmondsia chinensis* L Schneider), 931

Rhodospirillum rubrum -- Comparison of the hydrolysis of Zn-PPi^{2-} and the $MgPPi^{2-}$ as substrates and the effect of free cations upon membrane-bound pyrophosphatase of *Rhodospirillum rubrum*, 949

ribosomal ATPase -- Comparative analysis of ATPase of yeast elongation factor 3 and ATPase associated with *Tetrahymena* ribosomes, 713
ribosomal RNA -- Implications of a functional large ribosomal RNA with only three modified nucleotides, 30
ribosome -- An *in vitro* system for studying RNA-protein interaction: Application to a study of yeast ribosomal protein L1 binding to 5S rRNA, 167 -- Growth phase and growth rate dependence of ribosomal peptidyltransferase activity status in *Escherichia coli*, 963
RNA editing -- Apolipoprotein B messenger RNA editing: An update, 75 -- RNA editing in higher plant mitochondria: Analysis of biochemistry and specificity, 79 -- RNA editing in wheat mitochondria, 87
RNA-protein interaction -- An *in vitro* system for studying RNA-protein interaction: Application to a study of yeast ribosomal protein L1 binding to 5S rRNA, 167
RNAase III -- Lethal double-stranded RNA processing activity of ribonuclease III in the absence of SuhB protein of *Escherichia coli*, 294
RT6.2 protein -- Characterization of mammalian ADP-ribosylation cycles, 319
ruthenium -- Design of ruthenium-cytochrome c derivatives to measure electron transfer to cytochrome c peroxidase, 549

S

Saccharomyces cerevisiae -- Reciprocal effects of 2-fluoro-2-deoxy-D-glucose and glucose on their metabolism in *Saccharomyces cerevisiae* studied by multi-nuclear NMR spectroscopy, 233 -- Comparative analysis of ATPase of yeast elongation factor 3 and ATPase associated with *Tetrahymena* ribosomes, 713
Schizosaccharomyces pombe -- Effect of phenylarsine oxide on the fission yeast *Schizosaccharomyces pombe* cell cycle, 279
secondary structure -- The secondary structure of the insect defensin A depends on its environment. A circular dichroism study, 240
senescence -- Chromosomal instability and alteration of telomere repeat sequences, 817
site-directed mutagenesis -- Biological electron transfer: Structural and mechanistic studies, 506 -- Cytochrome b5, its functions, structure and membrane topology, 604 -- Mutation to glutamine of histidine 373, the catalytic base of flavocytochrome b_2 (L-lactate dehydrogenase), 621
site-selected incorporation -- Site-selected introduction of modified purine and pyrimidine.ribonucleosides into RNA by automated phosphoramidite chemistry, 125
site-specific mutagenesis -- Structure-function relationships in the ferredoxin/ferredoxin: $NADP^+$ reductase system from *Anabaene*, 539
skin integrity -- On the biological role of the nuclear polymerizing NAD^+: Protein(ADP-ribosyl) transferase (ADPRT): ADPRT from *Dictyostelium discoideum* and inactivation of the ADPRT gene in the mouse, 444
solid-phase synthesis -- Solid-phase synthesis of oligoribonucleotides using T4 RNA ligase and T4 polynucleotide kinase, 227
sorting isozymes -- Location of N^2,N^2-dimethylguanosine-specific tRNA methyltransferase, 45
specificity entropy -- Principles of protein-protein recognition from structure to thermodynamics, 497
Staphylococcus epidermidis -- Identity of macromolecules present in the extracellular slime layer of *Staphylococcus epidermis*, 217
steady-state kinetics -- Interpretations of cytochrome P450 mechanisms from kinetic studies, 573
stereochemistry -- The nucleoside deaminases for cytidine and adenosine: Structure, transition state stabilization, mechanism, and evolution, 92
stereospecificity -- Lack of stereospecificity of some cellular and viral enzymes involved in the synthesis of deoxyribonucleotides and DNA: Molecular basis for the antiviral activity of unnatural L-β–nucleosides, 861
structural probes -- Influence of modified nucleosides on tRNA structure as probed by two plant nucleases, 109
substrate binding structure -- Structure activity studies of the substrate binding site in monoamine oxidase B, 643
SuhB -- Lethal double-stranded RNA processing activity of ribonuclease III in the absence of SuhB protein of *Escherichia coli*, 294
superoxide anion -- On the mechanism of nitric oxide formation upon oxidative cleavage of C=N(OH) bonds by NO-synthases and cytochromes P450, 661
suppressor mutations -- Lethal double-stranded RNA processing activity of ribonuclease III in the absence of SuhB protein of *Escherichia coli*, 294
SV40-transformation -- Stable SV40-transformation and characterization of some DNA repair properties of fibroblasts from a trichothiodystrophy patient, 906

T

T4 polynucleotide kinase -- Solid-phase synthesis of oligoribonucleotides using T4 RNA ligase and T4 polynucleotide kinase, 227
T4 RNA ligase -- Solid-phase synthesis of oligoribonucleotides using T4 RNA ligase and T4 polynucleotide kinase, 227
telomerase -- Chromosomal instability and alteration of telomere repeat sequences, 817
telomeres -- Chromosomal instability and alteration of telomere repeat sequences, 817
teratocarcinoma cells -- Cell differentiation induced by poly(ADP-ribose) synthetase inhibitors, 368
Tetragenococcus -- Characterization and replication mode determination of the minimal replicon of *Tetragenococcus halophila* ATCC33315 plasmid pUCL287, 868
Tetrahymena pyriformis -- Comparative analysis of ATPase of yeast elongation factor 3 and ATPase associated with *Tetrahymena* ribosomes, 713
theta replication -- Characterization and replication mode determination of the minimal replicon of *Tetragenococcus halophila* ATCC33315 plasmid pUCL287, 868
thiols -- Progress in identifying clinical relevance of inhibition, stimulation and measurements of poly ADP-ribosylation, 385
tonoplast -- Transbilayer distribution of phosphatidylcholine and phosphatidylethanolamine in the vacuolar membrane of *Acer pseudoplatanus* cells, 174
transfer RNA -- Posttranscriptionally modified nucleosides in transfer RNA: Their locations and frequencies, 139
transgenic models -- Transgenic and knock-out models for studying DNA repair, 826
transglycosylation -- RNA editing in higher plant mitochondria: Analysis of biochemistry and specificity, 79
translation initiation -- Cap binding complexes and cellular growth control, 40
translesion synthesis -- Replication of DNA containing cisplatin lesions and its mutagenic consequences, 803
trichothiodystrophy -- Stable SV40-transformation and characterization of some DNA repair properties of fibroblasts from a trichothiodystrophy patient, 906
tRNA -- Enzymatic formation of N^2,N^2-dimethylguanosine in eukaryotic tRNA: Importance of the tRNA architecture, 54 -- tRNA-m1G methyltransferase interactions: Touching bases with structure, 62 -- Aminoacylation of transfer RNAs with 2-thiouridine derivatives in the wobble position of the anticodon, 66 -- Variations in tRNA modifications, particularly of their queuine content in higher eukaryotes. Its relation to malignancy grading, 99 -- The ability of bovine mitochondrial transfer RNA^{Met} to decode AUG and AUA codons, 104
tRNA modification enzymes -- Location of N^2,N^2-dimethylguanosine-specific tRNA methyltransferase, 45
tRNA modified nucleosides -- Variations in tRNA modifications, particularly of their queuine content in higher eukaryotes. Its relation to malignancy grading, 99
tRNA structure -- Influence of modified nucleosides on tRNA structure as probed by two plant nucleases, 109
tubulin -- Expression and secretion of malarial parasite β–tubulin in *Bacillus brevis*, 256
tyrosine phosphatase -- Effect of phenylarsine oxide on the fission yeast *Schizosaccharomyces pombe* cell cycle, 279

U-Z

U5 snRNA -- Phylogenetic conservation of modified nucleotides in the terminal loop 1 of the spliceosomal U5 snRNA, 16
UmuD'C-RecA protein interaction -- *In vitro* inhibition of RecA-mediated homologous pairing by UmuD'C proteins, 848
unscheduled DNA synthesis -- Stable SV40-transformation and characterization of some DNA repair properties of fibroblasts from a trichothiodystrophy patient, 906
vaccinia virus -- Vaccinia virus DNA replication: A short review, 774
vacuole -- Transbilayer distribution of phosphatidylcholine and phosphatidylethanolamine in the vacuolar membrane of *Acer pseudoplatanus* cells, 174
vesnarinone -- Cell differentiation induced by poly(ADP-ribose) synthetase inhibitors, 368
virus encapsidation -- Role of mouse polyomavirus late region in the control of viral DNA replication: A review, 780
wheat germ -- Stimulation of translation by reactive oxygen species in a cell-free system, 182
X-ray crystallography -- Cryoenzymology: How to practice kinetic and structural studies, 937
Xenopus laevis -- Enzymatic formation of N^2,N^2-dimethylguanosine in eukaryotic tRNA: Importance of the tRNA architecture, 54
***Xenopus* oocytes** -- cAMP-dependent phosphorylation of the cardiac L-type Ca channel: A missing link?, 957
xeroderma pigmentosum -- Stable SV40-transformation and characterization of some DNA repair properties of fibroblasts from a trichothiodystrophy patient, 906
yeast -- Enzymatic formation of N^2,N^2-dimethylguanosine in eukaryotic tRNA: Importance of the tRNA architecture, 54 -- An *in vitro* system for studying RNA-protein interaction: Application to a study of yeast ribosomal protein L1 binding to 5S rRNA, 167
yeast mitochondrial ribosomes -- Implications of a functional large ribosomal RNA with only three modified nucleotides, 30
zinc -- Activation of poly(ADP-ribose)polymerase in apoptic human cells, 378
zinc finger -- Analysis of biological function of poly(ADP-ribosyl)ation in *Drosophila melanogaster*, 466
Zn-PPi hydrolysis -- Comparison of the hydrolysis of $Zn\text{-}PPi^{2-}$ and the $MgPPi^{2-}$ as substrates and the effect of free cations upon membrane-bound pyrophosphatase of *Rhodospirillum rubrum*, 949
